

Your grade 1 student has received some science homework. They should have brought home a pamphlet with the title "Energy at Home". The pamphlet asks them to look around their home to find specific sources of energy. They are then to count certain things that pertain to these energy sources. Next they are to plan a way to save energy in their home. The pamphlet will be difficult to read, so please feel free to provide them with help, it will not be graded. Also, please feel free to discuss the answers with them.

This assignment is due following the Thanksgiving weekend.

If you have any questions please feel free to e-mail me:

collinsonm@hdsb.ca

If your child does not have the worksheet a copy can be obtained on my webpage:

<http://chatt.hdsb.ca/~collinsonm>

Thank you from Mr. Collinson
