

Energy Review

Our work on energy is coming to an end. In approximately one week the grade 1 students will show what they have learned over the last two and a half months. Below is a list of the main concepts we have learned for this unit, these are the things each grade 1 student should know.

- Energy is what makes things happen (move, grow).
- An energy chain is a picture showing how energy is passed from one thing to another (starts with the sun, then the plants, then the animals, then possibly more animals).
- Plants need sunlight to grow and survive.
- There are different sources of energy (gasoline, the sun, wind, food, muscle, electricity, etc).
- There are several possible outputs when energy is used (movement, heat, light, sound, growth, etc).
- Energy is not something that is unlimited; we need to try to save it.
- Life would be very different if we did not have some of our energy sources (no sun means no life, no electricity means no TV, computers, etc).

All of the worksheets used in class are on Mr. Collinson's webpage, and each worksheet has answers provided. Please review this information, and contact me if you find your grade 1 student is having difficulty.

Thanks

Mr. Collinson
