## Connections Amongst Living Things

We have talked about showing respect to all living things. We need to take care of plants, and we need to be kind to animals. But why? Why is it important to be respectful to living things?

Look at the picture below. Think about all the ways that the living things help each other.

How does the fish help the bear?

---

How does the tree help the squirrel?

---

How do the plants help the animals?

---

How does the bunny help the person?

---

Use the word box, at the bottom of the page, to complete the paragraph.

All living things \_\_\_\_\_ one another. The plants produce oxygen, which animals need to \_\_\_\_\_.

The \_\_\_\_\_ produce carbon dioxide, which the plants need to breathe.

Plants are also \_\_\_\_\_ to many animals. The plants get \_\_\_\_\_ from the \_\_\_\_\_, and the animals that eat the plants \_\_\_\_\_ that energy. Some animals are food to \_\_\_\_\_ animals. This is necessary for \_\_\_\_\_ to exist.

Plants can also provide \_\_\_\_\_ to animals. This helps animals \_\_\_\_\_ themselves from bad \_\_\_\_\_, or from other \_\_\_\_\_ animals. If we do not take \_\_\_\_\_ of the living things in our environment, life would be very \_\_\_\_\_.
