

On March 29th you will have a science quiz. Most of the questions will be very similar to questions you have already answered in class. If you did not complete all of your work in class, please look for a complete copy on Mr. Collinson's webpage. If you are having any trouble, please e-mail me so that I can help. The quiz covers lessons 1 through 11. There are five questions, which may be found below. Remember to add detail to your answers, think "why?" or "how?"

- In the table below, name five different plant parts and explain their job as part of the plant.
- If you had a white rose, and you needed a blue rose, what could you do? Why would it work?
- What are six things plants need to survive?
- Draw and label the four stages of a bean's life cycle.
- Name and describe two ways different plants have adapted to overcome threats to their survival.
