

Date: _____
Height: _____

Observations:

My Seed Journal

1. What are two things seeds need to germinate?

Water and warmth (also need space)

2. Why do seeds not need soil to germinate?

A bean is food, which is a source of energy. The plant uses the energy stored in the bean to produce a stem, leaves and roots.

The bean provides all the energy needed for this to happen.

3. Do you think all plants start from seeds?

No, some plants come from bulbs. Some plants can even grow from other pieces of the plant (normally the stem).
