

On March 29th you will have a science quiz. The quiz will focus on two things: The properties of light and the properties of sound. Most of the questions will be based on the experiments we have done in class, and be similar to the questions we have already taken up in class. If you did not complete all of your work in class, please look for a complete copy on Mr. Collinson's webpage. If you are having any trouble, please e-mail me so that I can help. The quiz covers lessons 1 through 12. I have listed the properties of both light and sound below. Remember to add detail to your answers, think "why?" or "how?"

### Light

- Light travels in straight lines.
- Light can reflect off a surface.
- Light can be absorbed.
- Light refracts when it changes substances.

### Sound

- Sound travels.
- Sound is caused by vibrations.
- Sound can be reflected.
- Sound can be absorbed.
