

Grade 7 Science

Unit 2: Ecosystems

Today you will present your information from last class. Please use the first 20 minutes of class to finalize any details you need, and prepare your group to present.

Recall that you will be doing a quiz based on these presentations. You will need to know the information from the other presentations, not just your own. I will share all of the presentations with all of you.

We will present in the following order:

1. Redirecting Water Flow
2. Fossil Fuels
3. The Carbon Cycle
4. Greenhouse Gases
