

TYPES OF STRUCTURES

This assignment is designed to help you learn some basic knowledge about structures. This is accomplished by having you teach the information to a family member. There are multiple steps to the assignment, so please follow the instructions carefully.

Note: Any online information about or for this assignment is found on the “Form and Function” link on Mr. Collinson’s Grade 7 Science webpage.

Step 1:

The first step to this assignment is for you to learn the knowledge that you will need to pass on. You may find this information on Mr. C.’s webpage. Please **do not print this information.**

Step 2:

Take the online quiz found on Mr. C.’s webpage. If you do not get perfect right away, go back and review the information, then try the quiz again.

Step 3:

The next step, once you fully understand types of structures, is to find an adult volunteer. You then teach the volunteer about the three different types of structures, using the information you have just learned. You are not to have them read it; you are to explain the information necessary to write the quiz.

Step 4:

Once you have finished your teaching, have your adult volunteer take the same online quiz you did. With your amazing teaching they should get 100% on the quiz.

Step 5:

When your volunteer has completed the quiz they will be asked to print a note stating that you have taught them about “types of structures”. They should then sign the note and you are to bring it to your next science class.

If you have any questions about the assignment you should e-mail Mr. Collinson at:
