

Before class starts, please write your name in one of the rectangles below.

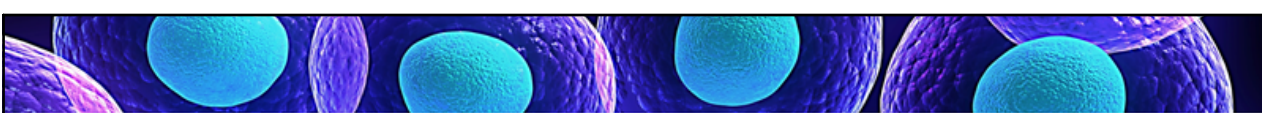

<b>Digestive System</b>	<b>Respiratory System</b>	<b>Circulatory System</b>	<b>Root and Shoot Systems</b>

Please sit with your group, and be prepared to listen to instructions. You will need all the time you can get.

Please listen carefully to these instructions. Next period you will be doing a presentation, is it is very important that all group members understand what they are required to do.

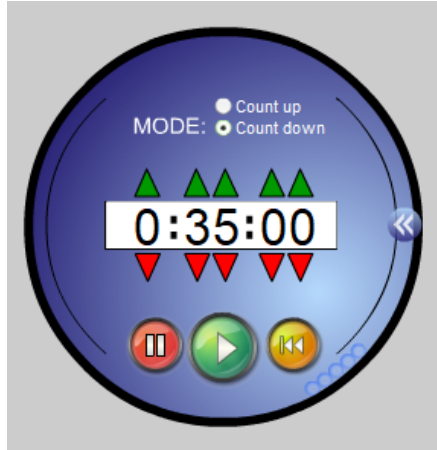

- Each group will be given a small amount of information to read.
- You are to use today's class time to prepare a group cloud presentation for next class (share it with me as soon as you create it).
- You may use any available resources (supplied reading, text book, other reading materials, internet, etc).
- Presentations are to be between 3-5 minutes in length.
- I recommend you use diagrams during your presentation (feel free to use internet pictures, or even short videos).
- Each student will receive an individual mark based on their knowledge of the topic.
- There will be a quiz based on these presentations, and you will need to know the information from the other presentations - you will NOT be given a quiz question based on your presentation.

## GRADE 8 SCIENCE QUIZ QUESTIONS

Quiz Date – \_\_\_\_\_

The last quiz of this unit will be based on Organ Systems. You will choose one organ system (not the one you presented), state some of the main organs in that system and also explain the general function of that organ system.

At some point in this lesson I will call each of you to my desk to show you your current science mark. This is the grade you would have if I had to do your report card today.
